Full-Stack Developer

All my life I've been interested in science and technology; I love building things and finding out how they work. I first learned HTML code around 1999-2000 on Geocities, where I learned how to manipulate a code to personalize a page like a bunch of other Xennials like myself. I found the resources online and continued my education after a long break in the beginning of 2017.

 I enrolled in a beginners Java course and really enjoyed the structure and methodology of coding; so I dug deeper with a HTML course. My next classes were all cyber security courses before I decided to go to a full time full-stack school in Asia in November 2018. The full-stack course was a lot of hard work and one of the most intensive things I've done but I came out with a solid knowledge for building apps.

My class graduated in March and I'm looking to keep building on what I know. If you visit www.nextbendev.github.io I've highlighted my strengths and more information. Since I've been out of school I've been building on my knowledge and keeping my skills sharp through projects. I have a strong understanding of Ruby on Rails, HTML, CSS, Javascript and currently learning NodeJS more in depth before I switch to Go(Lang).

In conclusion, I think that my background and skillsets have prepared me to be a successful contributing team member in an organisation like yours. I may not have the experience, but no one will work harder for you than me. Thank you for your time and consideration.

Best regards,

BEN SOMMERVILLE
